

# Why on earth was

# My Workplace Targeted?

Threat actors tend to attack **the entities with security vulnerabilities.**

You must take the damages caused by cyberattacks seriously.

(business suspensions due to malware infection and data breach, etc.)

**This can happen to anyone.**

## The causes of cyberattacks and the impacts.

<b>Causes</b>	Opening suspicious e-mail attachments	Vulnerabilities of devices and software used (flaws in cybersecurity)	Easy-to-guess password settings
	Access to suspicious websites		Improper password management
<b>Events</b>	Malware infection		Unauthorized access
<b>Damages and Impacts</b>	Loss of business suspension		Leakage of sensitive data
	Required cost	Investigation and Recovery	Leakage of Personal data
		Countermeasure	Decline in competitiveness
		Compensation	

Cyberattacks cause **various impacts** on **business operations.**

## Is the cyber security on your workplace secure enough?

✓ **Check !**

- Keep your OS and software **up-to-date.**
- Run **virus check on all data** in your computer regularly.
- Check **e-mail attachments or URLs** before you open.
- Check **unknown authors' programs** before you execute.
- Set your **password to a hard-to-find** one. (Recommended password : more than 10 characters including uppercase and lowercase letters, numbers, and symbols)
- Back up** your important data and test backups for recovery **regularly.**
