

知事指定薬物一覧

	通称名	構造式等
1	Methylenedioxynitazene	 <p>The structure shows a benzimidazole ring system with a nitro group (O₂N) at the 5-position. The 2-position is substituted with a propyl chain ending in a diethylamino group (N(CH₂CH₃)₂). The 4-position is substituted with a methylene bridge (-CH₂-) connected to a benzene ring, which is further fused to a 1,3-dioxole ring system.</p>
2	Fluetonitazepyne, N-pyrrolidino-fluetonitazene	 <p>The structure features a benzimidazole core with a nitro group (O₂N) at the 5-position. The 2-position is substituted with a propyl chain ending in a pyrrolidine ring. The 4-position is substituted with a methylene bridge (-CH₂-) connected to a benzene ring, which has a 2-fluoroethoxy group (-OCH₂CH₂F) at the para position.</p>
3	5-MeO-NiPT	 <p>The structure is a benzimidazole derivative with a methoxy group (-O) at the 5-position of the benzene ring. The 2-position of the benzimidazole ring is substituted with a propyl chain ending in a tert-butylamino group (-NH-C(CH₃)₃).</p>
